

Facundo Lizarraga

Software Engineer - TypeScript, Node.js, Python/FastAPI, AWS

Buenos Aires, Argentina · faculizarraga0@gmail.com · +54 9 11 5578-8721 · linkedin.com/in/facundolizarraga

SUMMARY

Software Engineer with five years of experience building and operating production SaaS platforms with TypeScript, Node.js, Python, and AWS. I lead the technical evolution of a multi-tenant product used by approximately 5,000 people, with ownership of its architecture, backend, data, testing, and CI/CD. I also build products with LLMs and agents, prioritizing controlled actions, traceability, and human review.

EXPERIENCE

Full Stack Developer - Zil Global (multi-tenant SaaS platform)

Mar 2022 - Present · Remote (contractor)

- Lead the evolution of the platform's backend architecture, built with TypeScript, Node.js, MongoDB, and AWS Serverless using Lambda, API Gateway, Step Functions, SQS, S3, EventBridge, and CloudWatch.
- Redesigned a critical financial-processing flow with AWS Step Functions and MongoDB transactions, cutting execution time from 4-5 hours to about 5 minutes while keeping every update atomic.
- Designed and built a digital wallet and revenue-distribution system integrated with the Stripe REST API, unifying two account models and adding human approval for payouts.
- Implemented an extensive automated test suite to protect balance and revenue integrity and prevent regressions in financial flows.
- Introduced a hexagonal-oriented separation of layers, decoupling business logic from MongoDB and AWS Lambda.
- Implemented an AI chat assistant for the platform, applying security practices to protect user data and prevent misuse.
- Built an audit-logging subsystem to maintain a reliable change history and resolve disputes, along with a GitHub Actions CI/CD pipeline and continuous testing with Jest.
- Provided technical guidance to three engineers through architecture direction and pull request reviews.

Planning and Logistics Intern - The Coca-Cola Company

Jul 2021 - Jan 2022 · Buenos Aires, Argentina

- Automated manual Excel and SAP workflows with Python, pandas, and openpyxl, replacing recurring reporting tasks across several operational areas.
- Built internal dashboards, file-upload tools, and reporting workflows with Power BI and Docker.

PROJECTS

Posture - AI posture-coaching product

- Built an end-to-end product that helps people improve their posture while working at a computer. It analyzes body position through the camera and alerts users in real time when it detects harmful patterns. Developed it as a multi-tenant SaaS with Python FastAPI, MongoDB, Qdrant, and neural networks trained on data expanded through local LLM-assisted labeling.

Marktboost - AI-scored lead-generation SaaS

- Built the backend of a product that helps businesses find and prioritize potential customers on Instagram. It collects and enriches profiles, then uses a local LLM to assess their fit for each business before adding them to the commercial workflow.
- Implemented the solution with a durable queue, an AWS Lambda, Step Functions, and EventBridge pipeline, and a Python FastAPI microservice with service-to-service authentication, per-account rate limiting, abuse detection, and alerts.

Coder IDP - internal development platform with AI agents

- Built an internal platform with Terraform and Docker to support the development of Posture and Marktboost by generating isolated, reproducible environments for their Node.js and Python/FastAPI stacks.
- Added schedule- and quota-limited AI routing with automatic failover to self-hosted Ollama, plus overnight agents that work through the backlog and deliver every change as a pull request subject to human review.

SKILLS

Backend: TypeScript, JavaScript, Node.js, Express, Python, FastAPI, REST APIs, microservices, distributed systems, hexagonal architecture **Cloud (AWS):** Lambda, Step Functions, API Gateway, SQS, SNS, EventBridge, S3, IAM, CloudWatch, Secrets Manager, Serverless Framework **Databases:** MongoDB, Mongoose, PostgreSQL, Prisma, Qdrant **AI and agents:** Ollama, OpenAI API, Anthropic Claude API, autonomous agents, prompt engineering, guardrails, self-hosted LLMs **DevOps and testing:** Docker, Terraform, GitHub Actions, CI/CD, Jest, Vitest, pytest **Integrations and methodologies:** Stripe, Airwallex, OAuth, webhooks, Git, Scrum, Kanban

EDUCATION

Industrial Engineering (coursework) - Universidad Católica Argentina (2016-2022) Completed coursework through the fifth year, including statistics, optimization, and operations research, before moving into software development full time.

Computer Engineering - Universidad de Palermo (2022-2023) Completed one year of coursework.

Teaching Assistant, Advanced Statistics - Universidad Católica Argentina (2021-2022) Supported practical Advanced Statistics classes for students during the pandemic.

CERTIFICATIONS AND LANGUAGES

Languages: Spanish (native), English (advanced) **Certifications:** Cambridge English: First (FCE), Cambridge IGCSE
